

## Concept Board

per room - 150

with new plan - 250

Concept boards are used to distil and establish a personal design style. Some clients have Pinterest boards or scrapbooks overflowing with references and ideas but still have problems creating a look unique to them. Others don't know where to even start. Concept or Style Boards are often the first step and a reference point in a design process.

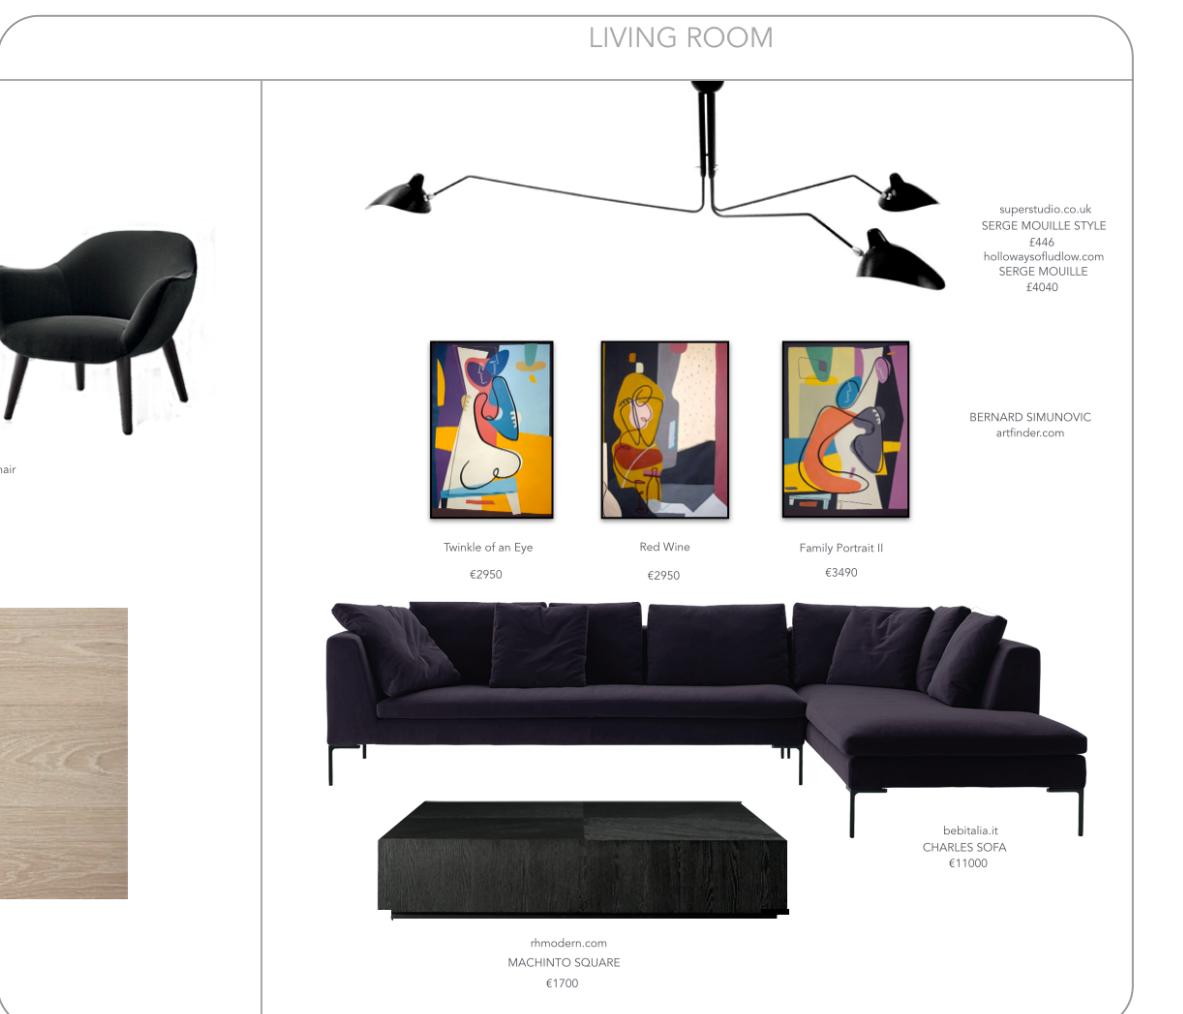

## 2D Plan - Layout Design

from - 200

2D Plan /layout design is the essential first step in spatial design development. Looking at your space from the top (known as a bird's perspective) unlocks solutions related to the use and flow of space that are normally hidden from the view.

What's included:

- furnished 2D plan as shown
- additional 2D plan with annotated dimensions

## Furniture Scheme

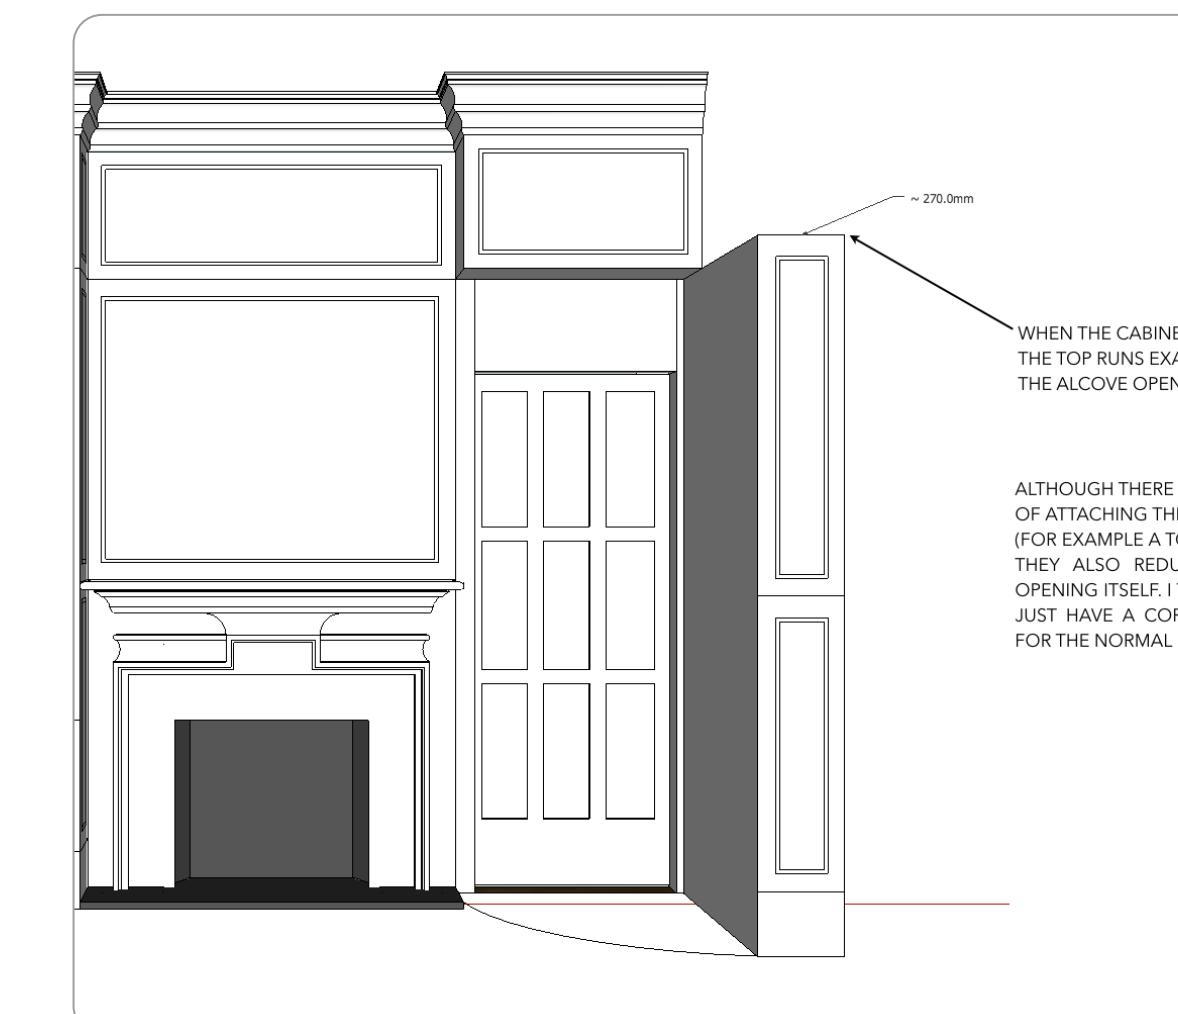

from - 200

Furniture scheme helps you create an environment that complements both its given surroundings and your life/style, serving as a guideline or in some cases a shopping list.

Whether a part of a Design Pack or chosen as a single Design Component, we'll first have to work on your room layout so that the scheme fits the space perfectly.

Included:

- simple 2D layout/plan
- furniture scheme board PDF

## Technical Drawings

from - 100

Technical drawings show how something works or is constructed. It includes plans, elevations, sections (a cross-cut view of an object, room, building), etc.

They can be of a very technical nature - ready for production 2D drawings or of an illustrative character, usually done in 3D, helping the non-technical observer understand the given feature or an object.

The need for a technical drawing is case specific and is applicable to all design related elements.

## Lighting Scheme

per room - 200

Lighting is an exceptionally important but often ignored component of interior design in both residential and commercial projects. Design of space might be perfect but can be let down by an inappropriate lighting scheme. The best schemes are usually done in layers so that, depending on the use of space or desired ambience, different layers of lighting come into play.

What's included:

- lighting plan of the space
- suggested light fittings

## Space Explorer

per room - 250

The first step in 3D spatial design and an ideal tool for builders (or anyone else) to explore the full potential of the space before embarking on a demolition course.

Easy solution to get a commission and/or prevent costly and time-consuming mistakes during the building process - show your client designs they can understand (especially if extending) and, if necessary, adjust according to their needs.

What's included:

- a PDF image file of the 3D model containing generic fittings and furniture to help visualise the scale of space
- options to choose from (case dependent)

## 3D Furniture Design

from - 200

Whether you are planning to commission a simple space-saving piece of furniture or an age-transcending family heirloom of extraordinary beauty, it is essential to know what it is you are actually getting.

With 3D furniture design, fitted or freestanding, clients have an opportunity to:

- turn their needs and ideas into a 3D model they can understand, cost assess and commission
- create a unique piece that reflects their personality and is a pleasure to use and live with
- commission our work on a tiered basis covering all stages from concept to production drawings

When designing your bespoke furniture we take into consideration your lifestyle, the space surrounding it, ergonomics, style and aesthetics.

## 3D Furniture Design In Situ

from - 400

Not knowing whether your requirements will be lost in translation when commissioning a bespoke piece of furniture can be daunting. Ideally suited for fitted pieces, 3D Furniture Design In Situ gives clients an opportunity to:

- see how their bespoke furniture works within its designated environment
- turn their ideas and requirements into a 3D model they can understand, cost assess and commission
- create a unique piece that reflects them, their surroundings and is a pleasure to use and live with
- commission our work on a tiered basis covering all stages from concept to production drawings

We'll take into consideration your needs, space, ergonomics, style and aesthetics.

## Spatial & Interior Design

from 550

A holistic and comprehensive approach to interior design that takes into consideration all aspects of the given space, from the way it works, flows, connects internally and with outside space to decor.

The three dimensional detailed composition contains elements sourced or designed on a case specific basis, including bespoke fitted or freestanding furniture where needed or required.

Transforming a 2D plan into a 3D vision provides a complete picture of your future space.

You might have a 2D plan already done by your architect or you can start with us from the scratch.

## 3D Single Room Design

from 550

Living rooms, dining rooms, cinema rooms, bedrooms, dressing rooms, nurseries, kids' rooms, playrooms, studies, hallways, mudrooms, ...basically any room that requires your love and attention.

With comprehensive approach all aspects of the given space are considered in order to create a detailed 3D model with elements sourced or designed on a case specific basis.

Included:

- options to choose from (case dependent)
- 2D plan, 3D plan, 3D elevations, 3D model images showing how space and design look and work, compiled in the PDF file

## 3D Kitchen Design

from 750

In the last Century kitchens have moved from hidden corners of a house (or outside of it) to being the centre of a household activity, proudly displayed in all their glory. A lot of attention is required prior to purchase or commission as they are usually the most expensive element of your habitat.

We design your kitchen from the scratch taking into consideration your lifestyle, functionality, aesthetics, preferred style and budget.

What's included:

- options to choose from (case dependent)
- 2D plan, 3D plan, 3D elevations, 3D model images showing how space and design look and work, compiled in the PDF file

## 3D Bathroom Design

from 600

Bathrooms can range from simple and functional to luxurious and indulgent spaces. Along with kitchens, they are usually the priciest investment and as such require considerable attention prior to building work and fittings purchase.

In order to design a bathroom fit for needs and desires of various household members, we take into consideration your lifestyle, functionality, aesthetics, preferred style, materials and budget.

What's included:

- 2D plan, 3D plan, 3D elevations, 3D model images showing how space and design look and work, compiled in the PDF file

## Renders

per room, existing clients - 200

new clients - Enquire

The next and last visual step from your Spatial & Interior Design - a 3D computer model conversion into a 2D image of a photographic quality.

This service is open to:

- existing clients who already have a developed 3D spatial model
- new clients, for whom we would first have to develop a new 3D model in order to create a rendered image. In this case you need to provide a plan of an existing place, elevations (where needed), images of your space and those we can refer to (images of things you like)

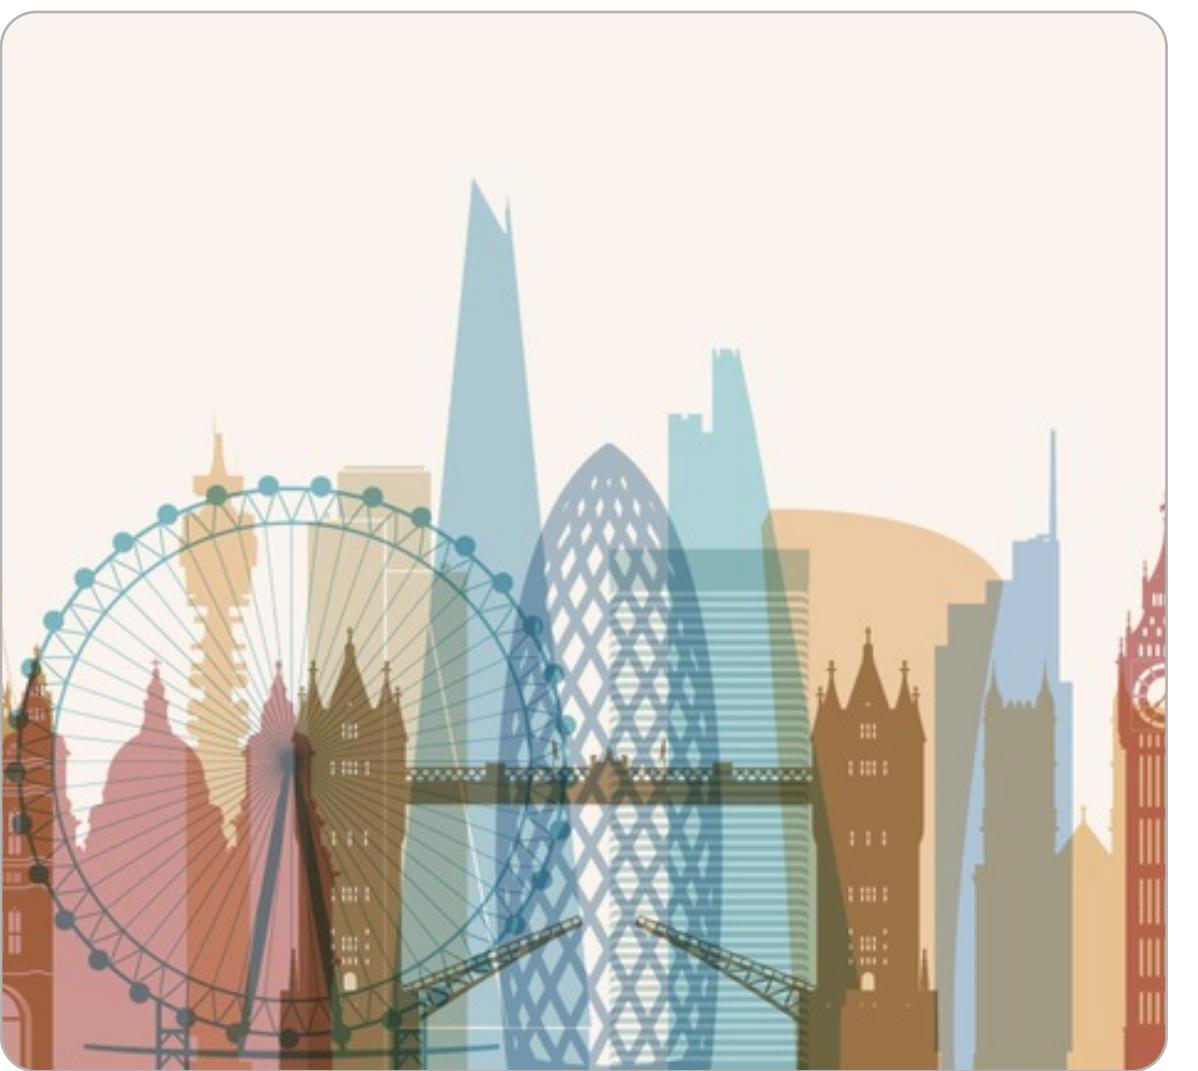

## Commercial Design

from - £500

Pop-Ups, cafes, bakeries, restaurants, bars, take-aways, hotels, B&Bs, offices, retail, exhibition spaces or any other space of business - we can do them all and help you get a clear vision and accurate implementation estimates.

Ideal for seasoned business owners looking to improve the function and appearance of an existing place as well as an aspiring ones searching for a vision.

We can take you from the concept stage to your very own branding - send us your brief, plans and images and we'll take it from there.

## London Offline Service

150

As a Londoner you have the luxury of our offline service. This means that if you are too busy or too lazy to commission our services through the website, we shall arrange a visit to your place, take a comprehensive brief and collect all essential information.
